

CNS060 20-Hydroxyecdysone Cyanotis arachnoidea C. B. Clarke Extract

20-HYDROXYECDYSONE is a steroid hormone is an white powder extract from Cyanotis arachnoidea C. B. Clarke root. 20-HYDROXYECDYSONE is a popular hot ingredients which used in many formula for man or animal. They are also know as Beta-acdysterone, edysterone, crustecdysone.

1. Specification

Ecdysterone (20-Beta Hydroxyecdysterone)

Botanical Source: Cyanotis arachnoidea C. B. Clarke

Part Used: The root

Assay: Ecdysone 50%-98% by HPLC

Appearance: White Crystalline powder

CAS 5289-74-7

Molecular Formula: C₂₇H₄₄O₇

Molecular Weight: 480.63406 g/mol

Specifications:

Ecdysone(Beta-acdysterone, edysterone, crustecdysone.) 50%-98% by HPLC

2. Function & Usage:

Function: Ecdysone can promote the amino acid to produce protein.

It can stimulate the grow of muscle. It can also improve the liver function in order to accommodate the stress.

They are thought to have similar effects to anabolic steroids but without the androgenicity which make s them (according to studies) safer than anabolic androgenic steroids.

They are also believed to have beneficial side effects in that they can lower cholesterol, control blood glucose, and also increase protein synthesis. It has also shown that it can help speed the healing of minor burns and wounds..

There has only been isolated studies on human test subjects, but trials on animals have delivered some a few positive results.

3. Doses

For blood sugar control a recommended dose is in the region of 200mg daily, doses for other treatments are largely undetermined.
